

Patients Report Improved Results Adding Clairisonic PRO®

From The Office of: Newport Dermatology & Laser Associates

On it's own, as part of your daily skin care routine, or as the perfect 'booster' to any IPL or IsoLaz acne treatment, our patients have discovered the *Clairisonic PRO®* (available only through skincare professionals) truly helps expedite the positive results of almost any skin rejuvenation procedure or daily skin care routine – cosmetic or clinical, face or body.

“Without an effective, daily, at-home cleansing and gentle exfoliation, it is difficult to maximize the results of any skin care treatment. “medical laser and light procedures have proven to be very effective in addressing skin concerns – but long term results also depend on a proper, daily skin care regime at home – particularly if you're managing difficult acne or rough dry skin-” according to Dr. Gilbert.

Most people are familiar with the traditional power brushes that circulate in only one direction and harshly pull and stretch the skin. These brushes tend to do more harm than good. The sonic frequency moves the Clairisonic PRO's soft, gentle, brush back and forth at more than 300 times per second. The micro-massage action clears pores, exfoliates, loosens dirt, makeup and oil and appears to stimulate blood flow.

As the first Dermatologist in OC to use and promote the Clairisonic PRO®, Dr. Gilbert recommends it because it is proven to remove more dirt (sebum and makeup) than traditional, superficial cleansing, allowing serums and moisturizers to absorb better. The result? Skin that's clean, clear and radiant. “I'd love to see all of my patients using one [Clairisonic PRO] at home – particularly teens struggling with acne.”

The Sonic Difference

Oscillating back and forth at a sonic frequency of more than 300 movements per second, the two dynamic zones of the Clarisonic® Skin Care System work with the skin, not against it.

Zone 1: Deep cleansing flexing action between the outer and inner brushes works deep within the pores to loosen dirt and oil.

Zone 2: Clarifying *back and forth* oscillating motion of the inner brush effectively cleans, clarifies and stimulates the skin

Key benefits of Clarisonic PRO:

- Softer, smoother skin
- Cleans so well that products absorb better (61% better in a Vitamin C study)
- Gentle enough for use twice daily
- Reduction of oily areas, dry skin patches and blemishes
- Pores, fine lines and wrinkles appear smaller. Removes 6X more make-up and 2X more sebum than manual cleansing

Sonicare is a registered trademark of Philips Oral Healthcare Inc - Clarisonic is a registered trademark of Pacific Bioscience Laboratories, Inc. The Clarisonic PRO series is not available in retail outlets or online.

Spa Corner

As professional estheticians, both Gitta and Manizheh agree with Dr. Gilbert. Post-summer skin and skin with acne especially benefit from using the Clarisonic PRO® as part of the daily cleansing routine.

Manizheh: “If you don’t get the cleansing step right, nothing else seems to penetrate the skin and work the way it should. My clients love the feel of the soft bristles.”

Gitta: “After using Clarisonic®, the products I use penetrate better - giving patients better results from those products. I really believe there is not a skin type or age group that wouldn’t benefit from Clarisonic®. From teens to seniors – the results are wonderful. I’m excited about this month’s special Clarisonic® offer. I’d love to see all of my clients have one at home.”
